Sai Rahul Tummala

Atlanta, GA (Open to relocation)

Rahultummala90@gmail.com **Mobile # (573)-292-6236**

Professional Summary

- Dedicated and skilled **Senior Full Stack Developer** with extensive experience in building high-end web applications using **React**, **PHP**, **JavaScript**/**TypeScript**, **Java**, **MySQL**, **JavaScript**, **jQuery, Tailwind and Bootstrap**.
- Proficient in the end-to-end development lifecycle, from meticulous analysis and design to meticulous testing and deployment.
- Well versed in **Object oriented design**, programming and Model View Controller (**MVC**)
- Adept at employing **PHP frameworks**, including **Laravel** and **Yii frameworks**, to create dynamic, high-performance web applications. Skillfully leveraging **React** and **jQuery** for intuitive user interfaces.
- Experience with using **React hook**s, **Redux**, **Fetch**, **Axios**, **Forms**, **Webpack, SCSS**
- Well-versed in modern **CSS** frameworks like **Tailwind** and **Bootstrap**, adept at creating visually appealing and responsive user interfaces. Skilled in **HTML5**, **CSS3**, and utilizing **Ajax** for dynamic web applications.
- Extensive database expertise with **MySQL**, **Microsoft SQL Server**, **MongoDB**, and **DynamoDB**. Experienced in database design, optimization, and utilizing ORM tools like **Eloquent** and migration tool like **Phinx**.
- Proven proficiency in **cloud technologies**, including **AWS** services such as **EC2**, **S3**, **RDS/Aurora**, **EKS**, and **Elasticache**.
- Experience in working with **OAuth2** and **SAML** for 3rd party authorizations and Single Sign on.
- Familiarity with web servers such as **Apache** and **Nginx**, showcasing expertise in deploying and configuring server environments for optimal application performance.
- Strong understanding of **REST API** development and testing, using tools like **Postman** and **Swagger**. Proficient in handling **XML** and **JSON** data formats.
- Version control expertise with **GitHub**, **Bitbucket**, and **SVN**, ensuring effective collaboration and code management within development teams.
- Project management proficiency with **JIRA**, **ADO**, and **Confluence**, contributing to streamlined development workflows and effective team communication.
- Familiarity with a range of IDEs including **PHPStorm**, **Eclipse**, **DataGrip**, **Sequel Pro**, and **DBeaver**, showcasing adaptability to various development environments.
- Comprehensive experience with application servers such as **WebLogic**, **WebSphere**, and **JBOSS**, demonstrating the ability to work in diverse server environments.
- Operating system versatility including **Linux**, **Windows**, and **MacOS**, ensuring adaptability to different development environments.
- Knowledgeable in caching technologies like **Redis** and **Memcached**, contributing to efficient session management and overall application performance.
- Scripting proficiency with **Shell Script** and **PL/SQL,** showcasing the ability to automate tasks and optimize processes.
- Well-versed in **content management systems (CMS)** like **WordPress** and **Drupal**, with a deep understanding of their architecture and customization.
- Mastery of web technologies, including **HTML**, **CSS**, **Bootstrap**, **Tailwind**, and **JavaScript**, to architect visually appealing and user-friendly interfaces that elevate the overall user experience.
- Demonstrated prowess in cloud technologies, particularly **AWS (EC2/EKS, S3, RDS),** ensuring optimal scalability and heightened performance for web applications.

- In-depth knowledge of unit testing tools, utilizing **PHPUnit** and JavaScript testing tool **Jest** to validate the robustness and reliability of developed code.
- Proven track record in developing and consuming **REST APIs**, employing tools like Postman and Swagger to streamline **API integration** and **testing**.
- Hands-on experience with **session data** and **caching** using **Redis** and **ElastiCache**, contributing to optimized storage and enhanced application performance.
- Adept in relational database management systems (**RDMS**), excelling in **SQL queries** and **query tuning** to ensure optimal database performance.

Technical Skills

Programming Languages	React, PHP, Java, JavaScript/Typescript, jQuery, Laravel, Yii framework
HTML & CSS	HTML5, CSS3, Tailwind, Bootstrap
AWS	EC2, S3, RDS/Aurora, EKS, ElastiCache, IAM
Database	MySQL, MS SQL Server, MongoDB, DynamoDB
Package Manager and DevOps Tools	Composer, NPM, Docker, Helm, Kubernetes
Containerization Software	Docker Desktop, Rancher Desktop
Web Servers	Apache, Nginx
API	REST API, Postman, Swagger, XML, JSON
Version Control	GitHub, Bitbucket, SVN
Unit Testing	PHPUnit, Jest
Scrum Tools	JIRA, ADO, Confluence
CMS & Tools	WordPress, MAMP, XAMPP
IDE	PHPStorm, Visual Studio, DataGrip, Sequel Pro, DBeaver
Application Servers	WebLogic, WebSphere, JBOSS
Operating Systems	Linux, Windows, MacOS
Caching	Redis, Memcached
Scripting	Shell Script

ORM & Database migration Tools	Eloquent, Phinx, Artisan
Package manager & module bundler	Webpack, NPM, Laravel Mix
Deployment Tools	Capistrano, TeamCity

Certification

AWS Certified Developer Associate (November 2022 to November 2025)

Education

Master of Science

University of Massachusetts Lowell, USA **May 2016**

Bachelor of Technology

Jawaharlal Nehru Technological University, India **May 2011**

Professional Experience

Invixon Technologies

Client – National Institute of Environemtal Health

Senior Software Engineer **Jan 24 – Present**

- Developed a Search based application using **Laravel and Vue frameworks**.
- Created **Docker** workflow that reduced environment set up time.
- Utilized **composition API** to create re-usable Vue components.
- Optimized **SQL** queries, implemented higher level of **code re-usability**.
- Created functionality to consume a legacy **SOAP API** and integrated it with the application.
- Created docker files for running **PHP**, **Laravel**, **Nginx** and **MS SQL Server** containers locally.
- Assumed a key role in the creation of CI/CD pipeline using **Jenkins**, **SonarQube**, **GitHub** and **EKS**.
- Created EKS manifest files to automate the deployment process to EKS.
- Responsibilities included running the **sprint planning meetings** and **daily standups**.

Environment: PHP, Vue, Laravel, MySQL, HTML, CSS, Tailwind, AWS, Docker, EKS, Jenkins, SonarQube

HealthcareSource - Symplr (Woburn, MA) **April 18 – Nov 23**
Software Developer

- Spearheaded the development of innovative **Assessment products** at HealthcareSource/symplr, focusing on web applications catering to healthcare and senior living facilities.
- Assumed a key role in the development of back-end functionalities using **PHP**, **Laravel**, and **Yii 1.1**, ensuring robust and scalable solutions for critical assessment processes.
- Orchestrated the enhancement of front-end interfaces by leveraging technologies like **React, JavaScript, jQuery and Ajax** resulting in intuitive, responsive and user-friendly web applications.
- Managed databases, implementing solutions with **MySQL** and **MongoDB**, and created responsive web pages using **React**, **CSS**, and **HTML** for an optimized user experience.

- Implemented **CSS frameworks** such as **Bootstrap** and **Tailwind** to streamline and standardize the styling across the web applications.
- Led the **migration** efforts, **upgrading applications** from **PHP 5.4** to **PHP 7.2** and subsequently to **PHP 8.2**, ensuring compatibility and leveraging the latest language features.
- Successfully **migrated applications** from on-premises **data center to AWS**, utilizing services like **EC2**, **EKS**, **S3**, **RDS**, and **DynamoDB** for improved scalability and reliability.
- Deployed applications using **Capistrano** and CI/CD platform **TeamCity**, automating deployment processes for efficiency and reliability.
- Utilized **Composer**, **Docker**, **Kubernetes** and **Helm** charts for streamlined dependency management, containerization, and orchestration of application components.
- Implemented **Dockerfile** configurations to facilitate a seamless development and deployment workflow, enhancing the efficiency of the development process.
- Executed SQL migration scripts to transition the database from **MySQL 5** to **MySQL 8**, ensuring data integrity and optimal performance.
- Configured and optimized **Apache** and **Nginx** web servers to host PHP applications, maximizing server efficiency.
- Implemented **server-side optimizations** for improved application response times.
- Managed version control using **GitHub**, and **Bitbucket**, ensuring code collaboration and version tracking.
- Collaborated with development teams to **resolve code conflicts** and maintain a cohesive codebase.
- Conducted thorough testing of **RESTful APIs** using **Postman**, ensuring API endpoints functioned as intended and met project requirements.
- Collaborated with cross-functional teams to validate **API integrations** with other components.
- Utilized **Capistrano** to automate deployment processes, streamlining the release of PHP applications to various environments.
- Implemented **deployment scripts** for consistent and reliable application deployment.
- Applied **Phinx** for creating migrations and utilized **Eloquent ORM** to interact with the **MySQL** database, ensuring efficient database management.
- Configured, maintained, and administered **Linux** servers both in an on-premises data center and on AWS, contributing to the overall stability and performance of the applications.
- Developed and consumed **REST APIs**, integrating applications with internal products and 3rd party vendors, ensuring seamless communication and interoperability.
- Actively participated in **functional requirements**, **QA**, and **sprint review meetings**, contributing to the collaborative development process.
- Embraced **Test-Driven Development** (TDD) practices, creating unit test cases for both back-end PHP code and front-end React code, ensuring the reliability and correctness of the applications.
- Demonstrated expertise in version control using **Git**, with hands-on experience in **GitHub** and **Bitbucket** for effective code management.
- Adhered to **CI/CD methodologies**, ensuring the consistent and reliable deployment of applications to various environments.
- Utilized **Docker Desktop** and **Rancher Desktop** for local development on **MacOS**.

Environment: PHP, React, Laravel, Yii 1.x, MySQL, MongoDB jQuery, Ajax, HTML, CSS, Tailwind, Bootstrap, AWS, Docker, Kubernetes, Helm, EC2, EKS, RDS/Aurora, DynamoDB, TeamCity, Capistrano, Postman, Composer, Linux, Apache, Nginx, GitHub, Bitbucket

Pixels 360 (Rockland, MA) **July 17 – April 18**
Software Developer

- Responsibilities included developing client websites from scratch using **WordPress**.
- Developed the front-end using **Bootstrap**, **HTML**, **CSS/SASS**, **JavaScript** and then integrated it with the backend using **PHP**, **MySQL**.
- Configured and maintained the **Linux** servers on **Rackspace** and **AWS**.
- Utilized external libraries such as Magnific-popup, Cube Portfolio.

- Performed **Cross browser testing** and fixed the front-end issues related to different browser types and devices of different sizes.
- Installed the **SSL certificates**, performed **SEO optimization** and **google analytics** tracking.
- Created scripts for backing up the Rackspace cloud server content on to the Rackspace cloud files using Open Cloud SDK and shell scripting.
- Created mobile **responsive U**I by utilizing the **CSS** framework **Bootstrap.**

Environment: PHP, JavaScript, jQuery, MySQL, HTML, CSS, WordPress, Drupal, Bootstrap, AWS, Google Analytics

Abierto Networks (York, ME) **June 16 – June 17**
Software Engineer

- Worked as a Software Engineer for developing a product called Dynamic Menu which is used for changing the prices and themes on a digital menu dynamically by using a web site.
- Involved in **developing**, **testing** and **supporting** phases of the product.
- Developed the application with **HTML**, **CSS**, **XML**, **jQuery**, **Ajax**, and **PHP** to create a dynamic and interactive experience.
- Utilized Linux environment and tools related to LAMP stack such as **XAMPP**.
- Worked on integrating the application with 3rd party API from Radical Technologies to make the application work on a media player and to get automatic updates.
- Used MVC (**PHP Zend Framework**) and **HTML5** local storage concepts.
- Worked on creating Login page, Users Module, Applications Page, and Pricing Module.
- Involved in the various phases of **SDLC** like requirements gathering, analysis, design, and development of the project.

Environment: PHP, Zend Framework, JavaScript, jQuery, Ajax, Linux, HTML, CSS

Infosys Limited - India (Client – Pfizer Inc.) **July 11 – August 14**
Senior Systems Engineer

- Installed and maintained **WebLogic**, **WebSphere** and **JBOSS** Application servers (9.2, 10.3 and 11g) applications hosted on **Solaris**, **Linux** and **Windows** Environments.
- Analyzing the **thread dumps** to resolve the issues and finding the root cause and documenting the root cause analysis.
- Automated server builds, scheduled restarts, disk clean up activity and archiving the log files using **Shell scripting.**
- Installed and maintained **Tomcat** and **Apache** web servers.
- Involved in changing the configuration of new builds on the existing environment and deployed to QA, Stage and Production environments as required.
- Worked on **Incident**, **Change** and **Release management**.

Environment: Java, WebLogic, WebSphere, JBOSS, Apache, Shell scripting, WLST scripting, Tomcat, Apache, Linux, Windows
